

INTEGRATED HMI TECHNOLOGY

Marlin Technologies can infuse complete electronic control in your automated refuse vehicles.

Marlin's M-Flex™ electronic controls are quick-to-market standard components that allow rapid flexibility in terms of software and hardware customization. In addition, our I/O Controllers and PDUs are each custom-purposed specifically for the unique application demand.

Collaborative Solutioning / Marlin engineers will work with your engineers to ensure the optimal solution — whether a complete system of Marlin devices, or integration with other brands of HMI components.
